WASTEWATER INNOVATION

## Sewage network bio-augmentation application in Lagadas, Greece

Municipality of Lagadas cooperated with Alphabio in order to improve the condition of the sewage network in terms of smell and clogging. The company applied a specialized microorganism strain with the addition of some nutrients to encounter the odor nuisance produced in sewage network. In the timeframe of one month all the odors were vanished, while the household fats and greases that create clogging problems in the pipelines were significantly reduced.
